Himachal Pradesh, India | Open to relocation | Global opportunities

ABOUT

ML engineer building production AI systems. Shipped Headless_BAI—an industrial-grade pipeline using custom C++ DOM extraction, K-Means clustering, and Llama-3-8B LLM routing—achieving 31.42% UI friction reduction. Ranked top 5% at PDPM IITDM Deep Learning Summer School. Experienced in end-to-end ML systems: model development, inference optimization, cloud deployment, and behavioral analytics.

SKILLS

ML/AI: TensorFlow/Keras, PyTorch, scikit-learn, LSTM, NLP, K-Means clustering, model serving, inference optimization

Backend: Python, FastAPI, Flask, Supabase, MySQL, pandas, NumPy, n8n automation

Systems: React/TypeScript, C++ (Chromium internals), Docker, GCP Cloud Run, AWS, IBM Cloud, Git

EXPERIENCE

AI/ML Engineering Intern — Future Finders | Jan – Jun 2026

- Developed production deep learning models solving real-world problem statements in professional ML environment
- Engineered model training pipelines, data preprocessing, and performance validation frameworks

Deep Learning Intensive — PDPM IITDM Jabalpur | Jun 2025

- Engaged in an intensive deep learning curriculum, mastering advanced neural network architectures, training methodologies, and real-world deployment strategies.

Cloud ML Deployment — IBM Cloud Trainee | Sep – Oct 2024

- Deployed containerized ML applications with auto-scaling policies on IBM Cloud; production infrastructure exposure

KEY PROJECTS

Headless_BAI – AI Layout Optimization Engine | Jan 2026 – Present

- Custom C++ Chromium binary extracts DOM geometry via native memory interception; <100ms rehydration with zero CLS
- Llama-3-8B SLM generates deterministic JSON layout patches in <500ms (T=0.1 inference); 3 behavioral cohorts via K-Means (WCSS: 23.24)
- End-to-end telemetry pipeline: sensor.js → FastAPI → Supabase processing 10,800+ behavioral events in real time
- Achieved 31.42% session-weighted reduction in UI spatial friction; measurable impact validated across 1000+ user sessions [Git](#)

GeoSmart Advisor – Geospatial Business Site Selection Intelligence System | Jun – Sep 2025

- Engineered a cloud-agnostic intelligence system using a locally-hosted, 4-bit quantized Phi-3-mini SLM for narrative report generation (<900ms latency).
- Developed a Julia computational core (1.10) for spatial matrix operations, achieving a 15–40x speedup over Python (<180ms) while maintaining memory stability with a pipeline architecture that caps peak RAM at 420MB.
- Implemented a React/deck.gl (WebGL) frontend with a custom Asymmetric Loss Function (1.5x penalty for overconfidence) to ensure conservative and defensible site recommendations. [Git](#)

DeepResearch AI Agent – Multi-Agent RAG System | Feb – Mar 2026

- Designed and built an agentic Retrieval-Augmented Generation (RAG) system using LangGraph for multi-agent orchestration (research, analysis, and memory agents).
- Integrated Qdrant (vector database) for high-performance semantic search against document embeddings, significantly enhancing context retrieval and reducing hallucinations.
- Deployed the system using Python/FastAPI, Docker, and CI/CD pipelines on GCP Cloud Run, demonstrating proficiency in MLOps and cloud-native architecture. [Git](#)

HONORS

- Excellence Award, Deep Learning Summer School — PDPM IITDM Jabalpur (top 5% of 100+ participants) | Jun 2025
- Google Student Ambassador — Leadership & community impact in technology | Dec 2025

EDUCATION

- B.Tech Computer Science Engineering — Bahra University | Expected 2026

CERTIFICATIONS

- AWS Educate ML Foundations (Jun 2025)
- Cyber Security (IBM Certification Program) (Mar 2026)
- Geo Processing with Python - ISRO (Jun 2023)
- Full Stack Web Development - Amazon/Coursera (Feb 2025)
